

SUMMARY OF CHANGES – SEPTEMBER 2017
“THE DESTRUCTION OF OZONE DEPLETING SUBSTANCES AND HIGH-GWP FOAM”
(VERSION 1.1)

This document describes the changes that were incorporated into Version 1.1 of the methodology.

1. Changes to emission rates found in Tables 5 and 17:

- a. HCFC-22 – The emission rate for HCFC-22 when used as a blowing agent in appliances was modified to equal that of HCFC-141b. This was an oversight in Version 1 of the methodology and has been corrected in Version 1.1.
- b. HFC-134a – The emission rate for HFC-134a in the “other foam” category was modified from 87.5% to 88.6%. The summation of the emission rates for HFC-134a found in tables 15 and 16 was corrected in Version 1.1.
